What is Arnywear?

Arnywear is medically tested fabric proven to be safe for even the softest of newborn baby skin and holds back insects for up to three hours with just one rubbing.

Arnywear is a revolutionary fabric designed to be worn as an aesthetic piece of summer clothing and still repel insects within 50cm of the users body while giving off a natural vapor that is pleasant to humans and awful to insects like mosquitoes.

Basically, just a piece of colored rectangular fabric, Arnywear can be used like any other cloth its size. There are [three different sizes](#) available, large, medium and small.

All three sizes have the same [colors available](#), aqua blue, khaki stripe, cerise pink and five-o.

Large arnywear fabric is 95cm x 168cm, and suggested uses may be items such as an adult sarong, beach dress, day/evening wrap, sun bed cover, table cloth, hammock sheet or large bed sheet.

Medium arnywear fabric is 40cm x 95cm, recommended as an excellent sarong for children or beach skirt for adults. This medium size might perhaps also be used as a small bed sheet, pillow cover, shoulder throw or baby stroller cover.

Small arnywear fabric is 56cm x 56cm and makes a great bandana, headband, arm wrap, car headrest cover or even dining mat.

With any of the three sizes, arnywear fabric is sure to do the trick against unwanted mosquitoes for up to 50cm around the user and three whole hours with just a little rubbing of the fabric.
